Backend, Distributed Systems & AI Infrastructure

Experience

Microsoft Feb. 2025 – Present

Software Engineer, Azure Core (OneDeploy)

- Owned cross-service deployment protection, enabling incidents in one service to inform deployment decisions for dependent services. Correlated **~24M** change records with **~2K** incidents per 15-minute run while cutting peak memory by **37%** and eliminating production-scale memory-limit failures.
- Redesigned monolithic deployment-decision processing as a modular Kusto/ADF pipeline, reducing production p95 latency from correlation candidate to action delivery by **80%** (15m44s to 3m10s).
- Led technical design for a multi-engineer Scala/Spark effort and represented the team in cross-partner discussions, scaling capacity from **30K to 120K events/min** in load tests and exceeding the **~100K/min** production workload across **75+ core Azure services**.
- Built a Kusto replay pipeline adopted as the team's PR validation standard for reproducing historical false negatives and verifying fixes.
- Enabled engineers to resume shared AI investigations and iterate on analysis by building authenticated Python messaging and history APIs, MCP integrations, and Kusto-backed session forking.

Casino Education Group Aug. 2022 – Oct. 2024

Full Stack Developer | Full-time for two summers, part-time during university

- Designed and built a Python and MySQL student-management platform for **1,000+ students**, supporting enrollment, attendance, and payment-plan tracking while automating progress reports to partner institutions.
- Kept **5+ production websites** and learning platforms available for instruction and business operations, owning application delivery and maintaining dedicated servers, firewalls, cron jobs, and database services.

Projects

pstack-copilot | *AI developer tooling* | Site · GitHub 2026

- Adapted pstack's multi-agent workflows to GitHub Copilot (**53 skills, 23 playbooks, 4 agents**), adding native CLI context-routing hooks and verified Azure DevOps stacked-PR auto-merge.
- Built Double, an independent cross-model supervisor with a zero-token RPC watcher that wakes on load-bearing agent claims to audit factual assertions and test edits against repo artifacts.

PappluAI | *21-card rummy AI & web engine* | Live App · GitHub 2026

- Designed a PyTorch Q-network (causal GRU + card/player attention) and curriculum self-play pipeline for imperfect-information 21-card Papplu, evaluating checkpoints via OpenSkill tournaments.
- Built an exact Python rules and minimum-penalty solver for multi-deck 21-card Papplu, and ported the engine and neural AI to a zero-backend JavaScript Web Worker for live browser play.

Skills

Languages: Python, Scala, TypeScript, JavaScript, SQL, KQL
AI & frameworks: PyTorch, LLM Agents, MCP, Node.js, React, REST APIs, Docker, CI/CD
Cloud & data: Azure, Apache Spark, Kusto, Azure Data Factory, Synapse, Azure DevOps, MySQL

Education

Northeastern University, Khoury College of Computer Sciences Sep. 2021 – Dec. 2024
B.S. in Computer Science and Mathematics **GPA: 3.96/4.00**
Summa Cum Laude; Honors Program
